

STAY COOL IN THE POOL

WITH THESE WATER-WISE TIPS

COVER UP!

- Reduce evaporation by covering your pool when you're not swimming.
- Pool covers also limit debris from winds and help conserve energy.

FIX LEAKS

- Finding and fixing pool and motor leaks can take a bit of work, but this is often the most effective way to reduce water waste.

LOWER THE TEMP

- Warmer water temperatures lead to higher evaporation rates.

NEED TO DRAIN YOUR POOL?

- Be sure to check your city ordinances for the proper way to drain pool or spas.

WATER QUALITY

- Clean filters regularly for higher efficiency.
- Wash filter cartridges out on landscapes and give your yard a little extra water.
- Keep water clean and swim-ready by staying up on chemicals, treatments and cleaning. This will also help avoid costly repairs to the plaster and motor, which may force pool draining.

SPLISH-SPLASH

- Don't over-fill the pool. Keep water levels a little lower to reduce water loss due to splashing.
- Turn off extra water features when you're not swimming to reduce water loss.

THE BIGGEST WATER WASTER IS A POOL THAT ISN'T USED.
